Bamboo - Code Exercise

Background

Bamboo have decided to open an online bank, Bambank, with its own currency, Bambeuros. The new bank will run a promotion giving all new customers 100 free Bambeuros when they sign up.

Requirements

We would like you to build a prototype web application that allows users to:
- Create an account / log in
- View their current balance and transactions
- Send Bambeuros to other users

The Solution

You may use any languages, frameworks and technologies you like. Please provide:

- **A link to the Git repo containing your solution**
    - Ideally GitHub, but any Git hosting service is fine (eg BitBucket, GitLab, etc.)
- **A separate, initial commit of any automatically-generated code**
    - For example, from `rails new`, so we can easily see your changes
- **A README:**
    - Instructions on how to run/deploy your solution
    - A list of any assumptions you make
    - Any other relevant information you want to provide

Expectations

- We don't want you to spend more than two hours on this test!
- Don't worry if you don't end up with a full working solution
